

COMPLIANCE WITH SWISS ORDINANCE SR 817.023.21

Flint Group Europe Inks and Coatings which are designed for application to the non-contact surfaces of Food Packaging structures, are formulated with substances listed in the current Swiss Ordinance SR 817.023.21 Annex 2 or Annex 10 (as updated on 1st May 2017).

A number of these substances appear in the annexes under their generic descriptions and reference codes rather than as individual substances.

Further as a national member of the European Trade Association –**The European Printing Ink Association [EuPIA]** to which Flint Group are affiliated, will not supply inks which intentionally contain materials which are carcinogenic, mutagenic or toxic for reproduction.

The statement above includes such substances that may also be included in the Swiss Ordinance's annex 10 list B for whatever reason.

The statement is based either on current knowledge of raw materials used, or – where proprietary materials are concerned - confirmation from our suppliers, that the intermediate materials used are manufactured using monomers and substances listed in the current substance lists of the Ordinance SR 817.023.21
